# Apply filters to SQL queries

Project description

In this scenario, I will need to obtain specific information about employees, their machines, and the departments they belong to from the database. The team needs data to investigate potential security issues and to update computers. I am responsible for filtering the required information from the database. In this report I will include screenshots of my code and portions of the output. This project will cover a suspicious event that took place and requires further investigation, using the log_in_attempts table, as well as filtering through the employee table to gather information for system updates.

Retrieve after hours failed login attempts

Investigating suspicious activity made after normal business hours (18:00). Success = 0 meaning false

```
MariaDB [organization]> SELECT *
    -> FROM log_in_attempts
    -> WHERE login_time > '18:00' AND success = 0;
+----------+----------+------------+------------+---------+-----------------+---------+
| event_id | username | login_date | login_time | country | ip_address      | success |

```

Retrieve login attempts on specific dates

A suspicious event was identified around these dates. We are searching for activity on and one day before the 2022.05.09.

```
MariaDB [organization]> SELECT *
    -> FROM log_in_attempts
    -> WHERE login_date = '2022-05-08' OR login_date = '2022-05-09';
+----------+----------+------------+------------+---------+-----------------+---------+

```

Retrieve login attempts outside of Mexico

Investing logins that did not happen outside of Mexico only.

```
MariaDB [organization]> SELECT *
    -> FROM log_in_attempts
    -> WHERE NOT country LIKE 'MEX%';
+----------+----------+------------+------------+---------+-----------------+---------+
| event_id | username | login_date | login_time | country | ip_address      | success |

```

Retrieve employees in Marketing

We need to update the employee machines for staff in the Marketing department, that is the situation in the East offices.

```
MariaDB [organization]> SELECT *
    -> FROM employees
    -> WHERE department = 'Marketing' AND office LIKE 'East%';
+-------------+--------------+----------+------------+----------+
| employee_id | device_id    | username | department | office   |

```

Summary

In Summary, after a suspicious event took place, I was tasked with investigating suspicious logins and filtering out results based on certain criteria. After which I was tasked with finding out several bits of information about employees, so that the team could perform system updates on their computers. I applied filters to SQL queries to get specific information on login attempts and employee machines. I used two different tables, log_in_attempts and employees. I used the AND, OR, and NOT operators to filter for the specific information needed for each task. I also used LIKE and the percentage sign (%) wildcard to filter for patterns.
